

The Cancellation System – Modified

With this staking plan you can make a profit from having slightly less than 50% winners (at 2/1) so even with many odds on selections, at 70% you will see a profit.

You will need a pen and paper for this plan because we need to add and cancel numbers to calculate the size of our next stake.

First of all we need to write a sequence of 4 numbers down on our paper. These 4 numbers could be in any sequence you like, but for my example I will use the numbers 1, 2, 2, 3.

To work out the stake, we add together the **first** and the **last** numbers in our list together. In this example, we would add 1 and 3 together, which would mean that our stake would be 4.

If a bet wins, we cross off 1 and 3.

This leaves us with 2 and 2 as our first and last number, so our next bet again would be 4.

If our first bet of 4 had lost, we would add this number to the end of our list, giving us a new last number.

Our list would now have looked like this; 1, 2, 2, 3, 4, so our next stake would be our first and last numbers again, which are 1 and 4 which now gives us a stake of 5.

Because you cross off two numbers when you win and only add one number when you lose, eventually all the numbers will be crossed out. When this happens our staking sequence is complete and at 2/1 profit odds, your profit would be 8.

The profit is always equal to the sum of the numbers in the original list; 1, 2, 2, 3.

If you had used numbers 1, 2, 5, 7 your profit would be 15 at 2/1 profit odds.

The numbers 1, 2, 3, 4 could actually mean £1, £2, £2, £3 or they could be £10, £20, £20, £30 etc. it's up to you. Also use any sequence of numbers you like but once you have decided on a series of numbers then stick to them and always start with a betting bank, start small and try to keep the bank separate from your other finances.

Re-Investment

As a general rule, when I have completed a full sequence with the system, I will re-invest 80% of my profit back into the next sequence; by this I mean that I usually increase my stake by 80% for the next sequence. Sometimes it is less but try to keep yours up between 60 & 80%.

You don't have to do this but I'm sure you'll be tempted at making more profit once you get used to winning.
